HOMEWORK SUBMISSION GUIDELINES: MATH 241 REAL ANALYSIS

JOHN VOIGHT

Homework submitted must meet the following requirements:

(1) The problems must be done in consecutive order.
(2) Unless otherwise specified, the problem is asking for a complete, rigorous proof. If you are not sure, assume you must justify any claim that you make.
(3) Papers must be stapled (or paper-clipped).
(4) Please do not tear out pages from a spiral notebook; use clean-edged paper.
(5) If you write out the problem, please clearly indicate where the problem statement ends and your solution begins.
(6) Your handwriting should be legible!
(7) Do not submit scratchwork; it is acceptable of course to turn in a partial solution.
(8) Please show your work—but no need to belabor a point which has been clearly and concisely explained.
(9) Proofs should be written in complete sentences with good logical connecting words.
(10) Never use a symbol that you have not defined.
(11) If you work with someone, please list them as a collaborator.

Work which does not meet these requirements will be returned ungraded.

Date: September 12, 2010.
