# MATH 115: ELEMENTARY NUMBER THEORY HOMEWORK \# 3 

JOHN VOIGHT

This homework is not due! It is just for fun.
Homework \#8 (Freebie):

- $\S 13.1: 1,2,8$
- Elliptic Curves:

EC1: Let $E: y^{2}=x^{3}-x+1$ over $\mathbb{Z} / 3 \mathbb{Z}$.
(a) Determine $\# E(\mathbb{Z} / 3 \mathbb{Z})$.
(b) Alice and Bob do a Diffie-Hellman key exchange using the group $E(\mathbb{Z} / 3 \mathbb{Z})$, where $E: y^{2}=x^{3}-x+1$, with $g=(1,1)$. They use secret exponents $a=2$ and $b=3$. What is the secret common key that they exchange?
